

What are the ways to create WordPress website using claude and some plugin, automatic creation on pages

 ChatGPT gpt-5-5

Yes. Today you can use **Claude + WordPress + an MCP (Model Context Protocol) plugin** to build and manage an entire WordPress website from chat. Claude can create pages, posts, menus, media, and even update existing content automatically, depending on the plugin and permissions.

(WordPress.org)

Option 1: Claude + WordPress MCP (Best)

Install an MCP plugin on your WordPress site, then connect it to Claude.

Some popular plugins are:

-
-
-

Claude can then:

- Create pages
- Create blog posts
- Upload images
- Edit existing pages
- Build menus
- Update SEO metadata
- Manage WooCommerce (supported plugins)
- Create categories and tags
- Bulk-edit content (WordPress.org)

Option 2: Claude + n8n + WordPress

Create an automation where:

1. Google Sheet/Notion/Airtable contains page list.
2. Claude generates content.

3. n8n sends it to WordPress via REST API.

4. Pages are published automatically.

Example:

- Home
- About
- Services
- Pricing
- Contact
- Blog
- FAQ

100+ pages can be generated automatically.

Option 3: Claude + Elementor

Claude generates:

- Headings
- Sections
- CTA text
- FAQs
- Testimonials
- Service descriptions

Elementor templates are then filled automatically using supported workflows or custom automation.

Option 4: Claude Code

Claude Code can generate:

- Custom themes
- Custom plugins
- Gutenberg blocks
- Landing pages
- WooCommerce customization
- Entire WordPress projects ([Claude](#))

Fully Automated Website Pipeline

Business Details

Claude generates sitemap

Creates all pages

Generates page content

Generates SEO titles/descriptions

Creates blogs

Uploads images

Publishes pages

Internal linking

SEO optimization

For your business, this can be expanded into an **AI Website Factory**:

- Read company details from a form or CRM
- Claude creates a complete sitemap
- Generates 30–100 pages
- Adds service pages and blog posts
- Creates FAQs and contact pages
- Publishes everything to WordPress automatically

This approach is well suited for agencies that need to build many client websites quickly with minimal manual work.

You Asked

If i already have a theme installed, can it take out the fonts colors csd from that or the pages already created ad demo page and create similar looking pages

Yes. If your theme is already installed, **Claude itself doesn't automatically "see" your website**, but if it's connected through a WordPress plugin (such as an MCP integration) or another automation that can access your site, it can use the existing site as a reference.

It can typically:

-  Read existing pages and their structure.
-  Reuse the theme's colors, typography, spacing, and layout conventions instead of inventing a new design.
-  Create new pages that match the style of your demo pages.
-  Copy the section order and component style (hero, features, testimonials, FAQs, CTAs, etc.) while replacing the content.
-  Use the same page builder (Elementor, Gutenberg, Bricks, Divi, etc.) if the integration supports it.

However, there are some limitations:

-  It cannot perfectly reverse-engineer every CSS rule or complex animation just by looking at the front end.
-  If a page builder stores layouts in a proprietary format, the integration needs to support that format to create native editable pages.
-  Some premium theme components may require the page builder's own APIs or templates.

For the best results, the workflow is:

1. Install and configure your theme.
2. Import the demo content (if available).
3. Connect Claude to WordPress.
4. Tell Claude something like:

"Use the existing Home page as the design reference. Create an About, Services, Contact, Pricing, and FAQ page with the same fonts, colors, spacing, button styles, and section layout. Keep everything editable in Elementor."

If you're planning to build many client websites, this can become a repeatable workflow where a single demo site serves as the design system, and AI generates new pages that maintain a consistent brand and visual style.
